

Craft Instructions for a Key Chain With Name

Craft accessories

- 1 key ring
- PP polyester cord
- 2-3 safety beads, depending on the number of strands
- Motif beads as you like, here e.g. heart and star
- Wooden beads
- Wooden lenses
- Letter cubes for your desired name

Step 1

When you have everything ready, you can start. The best thing to do is to start by sorting and arranging the materials for the keychain so that they match your ideas. There are no limits to your imagination. We always use safety beads when making key pendants, dummy chains, grasping rings or name chains. Since you can sink the knot into a safety bead, we find it more visually advantageous than leaving it visible. In addition, the knot is also protected from small, nimble children's hands.

Step 2

Now take a piece of PP cord and melt the ends with the lighter so that they can be strung through the holes more easily. First pull the string through the key ring. Then take a safety bead (or another bead) and string it on with the big hole facing down. Let the two cords hang down. Push both strings through the motif bead. In our case it is a heart motif bead.

Step 3

Now you can string the beads one after the other for the first strand. When all the wooden beads have been strung, a safety bead follows at the end. The larger opening of this bead points downwards, away from the pendant. Now make a double knot and fuse it. Then you can pull the string from the second strand to sink it.

Step 4

String the beads of the second strand. Again, add a safety bead at the end so that the larger opening faces downwards, away from the pendant. Pull the string as tight as possible to get the double knot as close as possible to the opening of the safety bead. When the knot is in place, you can fuse and sink it.

Of course you can also make just one strand. Or you can take two strings and make a key fob with three or four strands of beads.
